The Sun has got his hat on ...

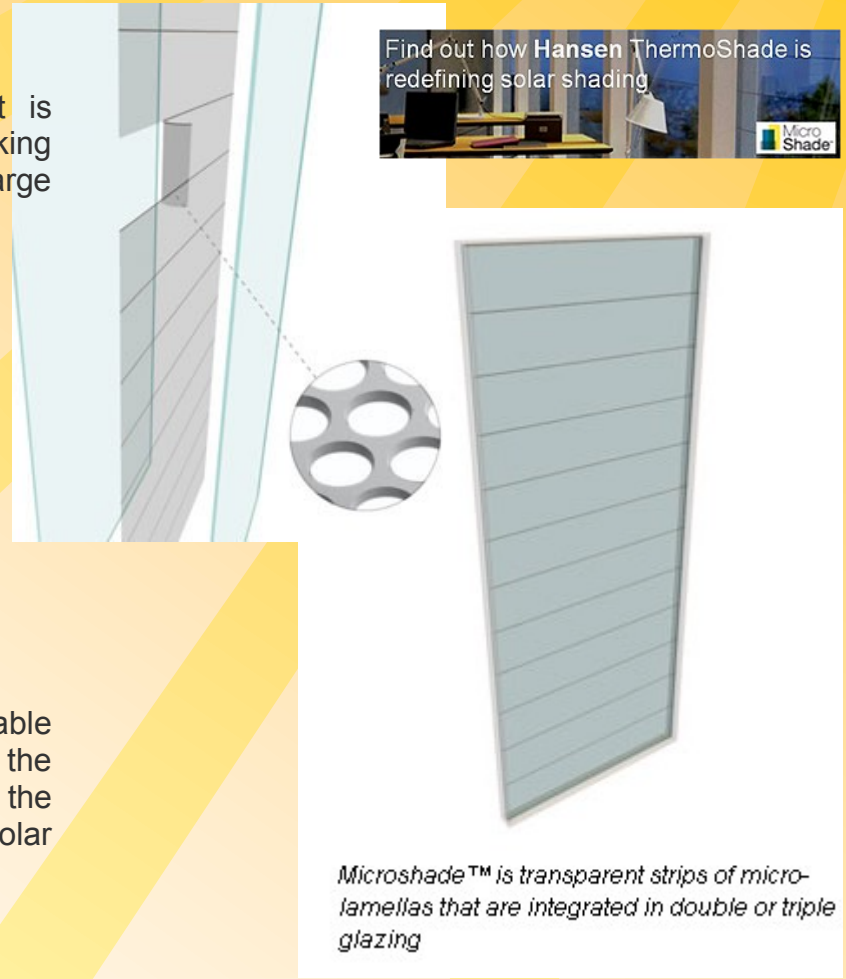

... or is it the latest innovative product from HansenGlass?

Redefining Solar Shading

Hansen ThermoShade is a breakthrough in solar shading that is integrated into façade glazing. It creates a significantly better working environment and reduces energy consumption in buildings with large glass facades.

- Shades as effectively as exterior solar shading
- Unrestricted view
- Aesthetical
- 100% natural daylight
- Easy to install
- No maintenance
- Resistant to wind and temperature
- Cost effective solar shading solution
- Incorporating unique Microshade™ technology

With its innovative design, Hansen ThermoShade provides a comfortable and temperate indoor climate, which reduces, or even may remove, the need for air-conditioning during hot summers. During the winter, the solar shading allows more sunlight to pass through so that the solar energy actively contributes to heating the building.

Microshade™ is transparent strips of micro-lamellas that are integrated in double or triple glazing
